Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	35	00:00:00.17	00:00:00.51
Command processing	947	00:00:01.66	00:00:03.09
Pass 1	5879	00:02:56.61	00:04:17.40
Symbol table sort	0	00:00:00.94	00:00:01.60
Pass 2	5138	00:00:32.20	00:01:05.20
Symbol table output	82	00:00:00.55	00:00:01.03
Psect synopsis output	5	00:00:00.00	00:00:00.04
Cross-reference output	298	00:00:06.27	00:00:08.87
Assembler run totals	12385	00:03:38.40	00:05:37.75

```
The working set limit was 4096 pages.
2258193 bytes (4411 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 697 non-local and 0 local symbols.
399 source lines were read in Pass 1, producing 93 object records in Pass 2.
509 pages of virtual memory were used to define 462 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;2	306
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;2	0

                                0000    130 ;                   Add TU78 magtape
                                0000    131 ;
                                0000    132 ;                   Dave Butenhof, 15-dec-1980, V6.2
                                0000    133 ;           13      Add ML11 PTDESC.
                                0000    134 ;
                                0000    135 ;                   Dave Butenhof, 19-mar-1981, version 6.3
                                0000    136 ;           14      Add DV11 PTdesc.
                                0000    137 ;           15      Add KA730 Ptdesc.
                                0000    138 ;
                                0000    139 ;           16      Dave butenhof, 4-sep-1981, version 6.5
                                0000    140 ;                   add RB730 and R80 Ptable descriptors
                                0000    141 ;
                                0000    142 ;           17      Dave Butenhof, 26-Oct-1981, version 6.-
                                0000    143 ;                   Add some missing devices
                                0000    144 ;
                                0000    145 ;           18      Dave Butenhof, 10-Nov-1981, version 6.-
                                0000    146 ;                   Add the UDA50 and RA80 devices
                                0000    147 ;
                                0000    148 ;           19      Dave Butenhof, 15-Dec-1981, Version 6.6
                                0000    149 ;                   Add PX780
                                0000    150 ;
                                0000    151 ;           20      Dave Butenhof, 23-Feb-1982, version 6.6
                                0000    152 ;                   Add CI_NODE and CI750 Ptable descriptors
                                0000    153 ;
                                0000    154 ;           21      Dave Butenhof, 16-Apr-1982, verison 6.7
                                0000    155 ;                   Add RA81 Ptable descriptor
                                0000    156 ;
                                0000    157 ;           22      Dave Butenhof, 29-Apr-1982, version 6.7
                                0000    158 ;                   Add RA60 Ptable descriptor
                                0000    159 ;
                                0000    160 ;           23      Dave Butenhof, 05-May-1982, version 6.8
                                0000    161 ;                   Activate the device name check feature which
                                0000    162 ;                   was added (latent) in 6.7 macros.
                                0000    163 ;
                                0000    164 ;           24      Dave Butenhof, 11-May-1982, version 6.8
                                0000    165 ;                   Add Lp07 and Lp26 Ptables for Dan Milleville
                                0000    166 ;
                                0000    167 ;           25      Dave Butenhof, 25-May-1982, version 6.8
                                0000    168 ;                   Add "console" Ptable desc. to IOBASE.  This allows
                                0000    169 ;                   new console Ptable to be displayed by SHOW
                                0000    170 ;                   (DEVICE | SELECT) without the annoying "..." which
                                0000    171 ;                   means it couldn't find the Ptable.  This device is
```

```
0000   172 ;                attached at DS startup by KERNEL, and as it has
0000   173 ;                a lower-case device type, CANNOT be attached manually!
0000   174 ;
0000   175 ;        26      M. Baggett, 20-Jul-1982 Ver 6.9
0000   176 ;                Added LP27 line printer.
0000   177 ;
0000   178 ;        27      Bob Bergazzi    1-Oct-82        Version 6.9
0000   179 ;                Added UNA11 (UNIBUS to NI Adapter)
0000   180 ;
0000   181 ;        28      M. Baggett      1-Dec-1982      Version 6.10
0000   182 ;                Added TU80 magtape and DZ32.
0000   183 ;
0000   184 ;        29      M. Baggett      8-Dec-1982      Version 6.10
0000   185 ;                Added TU81 magtape.
0000   186 ;
0000   187 ;        30      M. Baggett      10-Dec-1982     Version 6.10
0000   188 ;                Added VS100.
0000   189 ;
0000   190 ;        31      Bob Bergazzi    10-Jan-83       Version 6.11
0000   191 ;                Changed the comment before DS$GA_PTABLE.
0000   192 ;
0000   193 ;        32      M. Baggett      14-Jan-83       Version 6.11
0000   194 ;                Added RC25.
0000   195 ;
0000   196 ;        33      M. Baggett      15-Feb-83       Version 6.11
0000   197 ;                Added VS300 and RCF25.
0000   198 ;
0000   199 ;        34      M. Baggett      14-Mar-1983     Version 6.11
0000   200 ;                Added p-table for LESI controller.
0000   201 ;
0000   202 ;        35      M. Baggett      21-March-1983   Version 6.11
0000   203 ;                Added p-tables for LA12,LA100,LN01,VT220,VT240.
0000   204 ;
0000   205 ;        36      Bob Bergazzi    25-April-1983   Version 6.11
0000   206 ;                Added Ptable for KA785.
0000   207 ;
0000   208 ;        37      Richard Brown   2-May-1983      Version 6.11
0000   209 ;                Added SBIA and KAxxx.
0000   210 ;
0000   211 ;        38      Richard Brown   15-July-1983    Version 6-12
0000   212 ;                Added RC11.
0000   213 ;
0000   214 ;        39      M. Baggett      8-Aug-1983      Version 6.12
0000   215 ;                Added IEU11A
0000   216 ;
0000   217 ;        40      M. Baggett      7-Sep-1983      Version 6.13
0000   218 ;                Added VS125.
0000   219 ;
0000   220 ;        41      M. Baggett      21-Sep-1983     Version 6.13
0000   221 ;                Added DISK p-table.
0000   222 ;
0000   223 ;        42      M. Baggett      11-Oct-1983     Version 6.13
0000   224 ;                Added TAPE p-table.
0000   225 ;
0000   226 ;        43      M. Baggett      13-Oct-1983     Version 6.13
0000   227 ;                Added TS05 p-table.
0000   228 ;

```
0000    229 ;       44      Bob Bergazzi    Jan 23, 1984    Version 6.14
0000    230 ;               Added KAZZZ Ptable.
0000    231 ;
0000    232 ;       45      M. Baggett      Feb 6, 1984     Version 6.14
0000    233 ;               Added DMZ32 p-table.
0000    234 ;
0000    235 ;       46      Richard Brown   July 7, 1984    Version 7.0
0000    236 ;               Removed RC11, since it is really LESI.
0000    237 ;
0000    238 ;       47      Bob Bergazzi    Aug. 6, 1984    Version 7.1
0000    239 ;               Added DW000 ptable for BUA.
0000    240 ;
0000    241 ;       48      Bob Bergazzi    Sep. 4, 1984    Version 7.1
0000    242 ;               Changed BUA device name from DW000 to DWBUA.
0000    243 ;
0000    244 ;       49      Amy Iorio       Oct. 1, 1984    Version 7.1
0000    245 ;               Change KAXXX to KA86.
0000    246 ;
0000    247 ;       50      Amy Iorio       Oct. 11, 1984   Version 7.1
0000    248 ;               Added KAXXX.
0000    249 ;
0000    250 ;       51      M. Baggett      2-NOV-1984      Version 7.1
0000    251 ;               Added TK50.
0000    252 ;
0000    253 ;       52      Bob Bergazzi    Nov. 12, 1984   Version 7.1
0000    254 ;               Added BCI750.
0000    255 ;
0000    256 ;       53      M. Baggett      15-Nov-1984     Version 7.1
0000    257 ;               Added RX31,RX32,RX50,RX180,RUX50.
0000    258 ;
0000    259 ;       54      Bob Bergazzi    Nov. 29,1984    Version 8.0
0000    260 ;               Added KA810. Removed KAXXX.
0000    261 ;
0000    262 ;       55      M. Bagggett     18-Dec-1984     Version 8.0
0000    263 ;               Added VT101, VT102, VT125.
0000    264 ;
0000    265 ;       56      A. Iorio        18-Jan-1985     Version 8.1
0000    266 ;               Added DHU11, DR11C
0000    267 ;
0000    268 ;       57      A. Iorio        5-Mar-1985      Version 8.1
0000    269 ;               Added DX20, TU70, TU72
0000    270 ;
0000    271 ;       58      A. Iorio        12-Mar-1985     Version 8.1
0000    272 ;               Added DHV11
0000    273 ;
0000    274 ;       59      Bob Bergazzi    24-Apr-1985     Version 8.1
0000    275 ;               Added KA820, remove KA810 later.
0000    276 ;
0000    277 ;       60      Bob Bergazzi    16-May-1985     Version 8.2
0000    278 ;               Added BLA ptable.
0000    279 ;
0000    280 ;       61      Bob Bergazzi    23-May-1985     Version 8.2
0000    281 ;               Added KDB50 ptable (BDA).
0000    282 ;
0000    283 ;       62      Bob Bergazzi    30-May-1985     Version 8.3
0000    284 ;               Added SLU, NI ptables.
0000    285 ;
```

```
0000   286 ;        63      Bob Bergazzi    11-June-1985    Version 8.3
0000   287 ;                Changed BCI750 to CIBCI.
0000   288 ;
0000   289 ;        64      Bob Bergazzi    18-June-1985    Version 8.3
0000   290 ;                Removed KAZZZ ptable.
0000   291 ;
0000   292 ;        65      M. Baggett      7-Aug-1985      Version 8.3
0000   293 ;                Added RDBX1 p-table.
0000   294 ;
0000   295 ;        66      Amy Iorio       12-Aug-1985     Version 8.3
0000   296 ;                Added LN03, LA210, VT61, VT71, VT131, and VT132 ptables.
0000   297 ;
0000   298 ;        67      M. Baggett      19-Aug-1985     Version 9.1
0000   299 ;                Added RD52,RD53.
0000   300 ;
0000   301 ;        68      M. Baggett      11-Sep-1985     VDS Ver 9.0
0000   302 ;                Added p-tables for DEBNT(AIE),KA800,KFBTA(AIO),LANCE
0000   303 ;
0000   304 ;        69      Bob Bergazzi    20-Sep-1985     Version 9.0
0000   305 ;                Removed KA810 ptable since KA820 supersedes it.
0000   306 ;
0000   307 ;        70      Jim Baranski    09-Oct-1985     Version 9.0
0000   308 ;                Added RA82 disk Ptable descriptor.
0000   309 ;
0000   310 ;        71      Jim Baranski    10-Oct-1985     Version 9.0
0000   311 ;                Added LUA11 Ptable descriptor.
0000   312 ;
0000   313 ;        72      M. Baggett      22-Oct-1985     Version 9.0
0000   314 ;                Removed RDBX1 p-table.
0000   315 ;                                                                        ;G:4
0000   316 ;        73      J. Baranski     11-Mar-1986     Version 10.0            ;G:4
0000   317 ;                Added RRD50 PTable descriptor.                          ;G:4
0000   318 ;                                                                        ;G:12
0000   319 ;        74      M. Baggett      5-May-1986      Version 10.0            ;G:12
0000   320 ;                Added RD54.                                             ;G:12
0000   321 ;                                                                        ;G:13
0000   322 ;        75      Richard E. Muse   19-may-1986   version 10.1            ;G:13
0000   323 ;                added CIBCA                                             ;G:13
0000   324 ;                                                                        ;G:14
0000   325 ;        76      M. Baggett      10-Jun-1986     Version 10.1            ;G:17
0000   326 ;                Added DRB32.                                            ;G:14
0000   327 ;                                                                        ;G:17
0000   328 ;        77      Bob Bergazzi    2-Sep-1986      Version 10.3            ;G:17
0000   329 ;                Arranged the table of ptable descriptors so that there is one ;G:17
0000   330 ;                device listed per line of code.  Added the symbol       ;G:17
0000   331 ;                PTABLE_DESCRIPTORS to identify the beginning of this list.  ;G:17
0000   332 ;                This was done so that the release group can more easily parse ;G:17
0000   333 ;                the source to obtain a list of supported devices.       ;G:17
0000   334 ;                                                                        ;G:17
0000   335 ;                ********************************************************* ;G:17
0000   336 ;                                    IMPORTANT!!                         ;G:17
0000   337 ;                ********************************************************* ;G:17
0000   338 ;                Please follow this convention when adding new devices   ;G:17
0000   339 ;                ********************************************************* ;G:17
0000   340 ;                                                                        ;G:17
0000   341 ;                Also removed $DS_RRD50_DEF call because it was moved into the ;G:17
0000   342 ;                $DS_RRD50 ptable descriptor in DIAG.MAR.                ;G:17
```

```
0000   343 ;                                                                    ;G:19
0000   344 ;       78      Stephen Meier   30-Oct-1986     Version 10.4        ;G:40
0000   345 ;               Added XBI .                                         ;G:19
0000   346 ;                                                                   ;G:27
0000   347 ;       79      David Gearin    30-Jan-1987     Version 10.5        ;G:28
0000   348 ;               Added p-table for LG01, LG02, LG03.                 ;G:27
0000   349 ;                                                                   ;G:27
0000   350 ;       80      Ingrid Martin   4-Feb-1987      Version 10.5        ;G:28
0000   351 ;               Added KA888.                                        ;G:55
0000   352 ;                                                                   ;G:33
0000   353 ;       81      David Gearin    11-Feb-1987     Version 10.5        ;G:33
0000   354 ;               Added P-table data for drb32.                       ;G:33
0000   355 ;                                                                   ;G:33
0000   356 ;       82      Bob Bergazzi    4-Mar-1987      Version 10.7        ;G:33
0000   357 ;               Added RA70.                                         ;G:33
0000   358 ;       83      Stephen Meier   18-Mar-1987     Version 10.7        ;G:36
0000   359 ;               Added KA9CC     (VAX 6200 processor)                ;G:56
0000   360 ;                                                                   ;G:40
0000   361 ;       84      M. Baggett      10-Apr-1987     Version 10.7        ;G:39
0000   362 ;               Added p-table for TK70,DHB32.                       ;G:39
0000   363 ;                                                                   ;G:41
0000   364 ;               Bob Bergazzi    22-may-1987     Version 10.8        ;G:41
0000   365 ;               Added DEBNA, DEBNK ptables.                         ;G:41
0000   366 ;                                                                   ; ;G:4
0000   367 ;               David Gearin    01-July-1987    Version 10.9        ; ;G:4
0000   368 ;               Added RV20 ptable                                   ;G:42
0000   369 ;                                                                   ;G:43
0000   370 ;               Bob Bergazzi    12-aug-1987     Version 10.9        ;G:45
0000   371 ;               Changed .LIB back to $DIAG.                         ;G:45
0000   372 ;                                                                   ;G:46
0000   373 ;       46      Stephen Meier   29-Sep-1987     Version 10.10       ;G:46
0000   374 ;               Version 70 of Diag... support for > 4 BI's.         ;G:46
0000   375 ;                                                                   ;G:47
0000   376 ;               Ingrid Martin   6-oct-87        version 10.10       ;G:47
0000   377 ;               Permently changed KA888 to KA884.                   ;G:47
0000   378 ;               Added DS_PBIA to device list.                       ;G:47
0000   379 ;               Removed call to $DS_DEVTYP for DS$GA_PTDESC because there  ;G:47
0000   380 ;               are now too many devices.                           ;G:47
0000   381 ;                                                                   ;G:54
0000   382 ;               David Gearin    20-Oct-1987     Version 10.10       ;G:54
0000   383 ;               Added support for RA90 ptables.                     ;G:54
0000   384 ;                                                                   ;G:56
0000   385 ;               Stephen Meier   12-Feb-1988     Version 10.11       ;G:56
0000   386 ;               Changed XBI to DWMBA, added KA62A, and added TBK50. ;G:57

Cross-reference output	218	00:00:01.61	00:00:02.22
Assembler run totals	14035	00:00:47.72	00:01:00.72

```
The working set limit was 4000 pages.
2641188 bytes (5159 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 770 non-local and 0 local symbols.
846 source lines were read in Pass 1, producing 111 object records in Pass 2.
596 pages of virtual memory were used to define 519 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	350
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	0

```
The working set limit was 3400 pages.
186284 bytes (364 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1018 non-local and 44 local symbols.
681 source lines were read in Pass 1, producing 69 object records in Pass 2.
40 pages of virtual memory were used to define 39 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	3
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	10
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	14
SYS$COMMON:[SYSLIB]STARLET.MLB;2	8
SYS$COMMON:[SYSLIB]STARLET.MLB;2	0
TOTALS (all libraries)	35

```
1512 GETS were required to define 35 macros.

There were no errors, warnings or information messages.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	33	00:00:00.01	00:00:00.19
Command processing	942	00:00:00.29	00:00:01.16
Pass 1	568	00:00:02.42	00:00:04.31
Symbol table sort	0	00:00:00.19	00:00:00.19
Pass 2	20	00:00:00.68	00:00:01.90
Symbol table output	2	00:00:00.07	00:00:00.20
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	4	00:00:00.09	00:00:00.11
Assembler run totals	1573	00:00:03.75	00:00:08.06

The working set limit was 2900 pages.
140774 bytes (275 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 747 non-local and 35 local symbols.
748 source lines were read in Pass 1, producing 53 object records in Pass 2.
32 pages of virtual memory were used to define 31 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	10
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	10
SYS$COMMON:[SYSLIB]STARLET.MLB;2	6
SYS$COMMON:[SYSLIB]STARLET.MLB;2	0
TOTALS (all libraries)	27

1149 GETS were required to define 27 macros.

There were no errors, warnings or information messages.

```

The working set limit was 2400 pages.
168114 bytes (329 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1027 non-local and 25 local symbols.
383 source lines were read in Pass 1, producing 67 object records in Pass 2.
27 pages of virtual memory were used to define 25 macros.

Pass 2	19	00:00:00.54	00:00:01.13
Symbol table output	2	00:00:00.02	00:00:00.06
Psect synopsis output	0	00:00:00.01	00:00:00.00
Cross-reference output	2	00:00:00.02	00:00:00.06
Assembler run totals	1527	00:00:03.14	00:00:07.28

The working set limit was 2900 pages.
138352 bytes (271 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 608 non-local and 18 local symbols.
365 source lines were read in Pass 1, producing 44 object records in Pass 2.
24 pages of virtual memory were used to define 23 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	6
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	6
SYS$COMMON:[SYSLIB]STARLET.MLB;2	6
SYS$COMMON:[SYSLIB]STARLET.MLB;2	0
TOTALS (all libraries)	19

902 GETS were required to define 19 macros.

There were no errors, warnings or information messages.

```

```

```
                        0000    150 ;
                        0000    151 ;           18      Revised basic program loop
                        0000    152 ;           19      Fix for changed position of year in DS$GT_NEWYEAR
                        0000    153 ;                   Added separate allocations for USER, EXEC, and SUPER stacks
                        0000    154 ;           20      Added call to INI$PTABLE to initialize P-table list at
                        0000    155 ;                   supervisor start.
                        0000    156 ;           21      Added code to Auto configure/ATTACH the default load device
                        0000    157 ;                   when loaded with DIAGBOOT.
                        0000    158 ;           22      Added process exit handler to execute use cleanup and
                        0000    159 ;                   deallocate device allocated by select.
                        0000    160 ;
                        0000    161 ;           23      - Roger Riggs, 31-Aug-1979
                        0000    162 ;                   Added initial VDT breakpoint and saved VMB boot flags
                        0000    163 ;
                        0000    164 ;           24      - Roger Riggs, 21-Jan-1980, Version 5.2
                        0000    165 ;                   Added code to always prompt APT on start, also copy
                        0000    166 ;                   processor type code to EXE$GB_CPUTYPE
                        0000    167 ;
                        0000    168 ;           25      - David R. Butenhof, 06-feb-1980
                        0000    169 ;                   Routine INIT_CONTEXT should force AST delivery enable.
                        0000    170 ;
                        0000    171 ;           26      - John Ciukaj, 25-Jan-1980, Version 5.2
                        0000    172 ;                   Added location BOOT$L_DEVTYP to be loaded from RPB$B_DEVTYP.
                        0000    173 ;
                        0000    174 ;           27      - Roger Riggs, 12-Mar-1980
                        0000    175 ;                   Clear DS$GB_MM_ENB on START 10000, as well as memory managment
                        0000    176 ;
                        0000    177 ;                   - Roger Riggs, 24-Mar-1980
                        0000    178 ;           28      Added code to verify that system identification register
                        0000    179 ;                   agrees with current supervisor.
                        0000    180 ;           29      Added code to type message and exit if SYS$INPUT is not
                        0000    181 ;                   a terminal or a mailbox.  Fix for SPR#11-28511.
                        0000    182 ;                   Later fix will use RMS for SYS$INPUT I/O in usermode.
                        0000    183 ;
                        0000    184 ;                   - Dave Butenhof, -Mar-1980
                        0000    185 ;           30      Add RMS setup in usermode, to allow supervisor execution
                        0000    186 ;                   via VMS command file/batch.
                        0000    187 ;           31      Fix CTL$GL_CCBBASE label define to point to a pointer
                        0000    188 ;                   longword.  And fix order of arguments to PRINT on SID
                        0000    189 ;                   mis-match.
                        0000    190 ;
                        0000    191 ;           32      - Roger Riggs, 21-May-1980, Version 5.4
                        0000    192 ;                   Changed order of stacks to allow for memory protection
                        0000    193 ;                   when MM is on
```

```
                        0000   195 ;                - Roger Riggs, 19-Jun-1980, Version 6.0
                        0000   196 ;          33    Moved IOC$GL_PSFL/BL to Entry
                        0000   197 ;          34    Added JIB
                        0000   198 ;
                        0000   199 ;          35    - Dave Butenhof, 28-aug-1980, Version 6.0
                        0000   200 ;                Add call to RMS$INIT in standalone initialization to
                        0000   201 ;                clear RMS file table.
                        0000   202 ;
                        0000   203 ;                - Roger Riggs, 08-Sept-1980, Version 6.0
                        0000   204 ;          36    Added code to set and   tore on exit the default directory
                        0000   205 ;                and disk.
                        0000   206 ;          37    Move translation of load device name to DEF$Q_DEV on
                        0000   207 ;                usemode entry
```

```
                                0000   209 ;
                                0000   210 ;       38      - Roger Riggs, 17-Oct-1980
                                0000   211 ;               Made reference to EXE$GQ_SYSTIME L/ offset.
                                0000   212 ;
                                0000   213 ;               - Dave Butenhof, 17-oct-1980, version 6.1
                                0000   214 ;       39      Add new argument to DSX$CNTRLC; DISABL--if low bit is set,
                                0000   215 ;               disables control C handling, if clear, enables it.  Also
                                0000   216 ;               KB_CHECK ignores control C flag if handling is disabled.
                                0000   217 ;               Also, if user control C routine return failure code, the
                                0000   218 ;               Supervisor will proceed to handle the control C normally
                                0000   219 ;               itself.
                                0000   220 ;       40      Add label BEGIN_BLISS (same as BEGIN) for BLISS routines to
                                0000   221 ;               use after INIT_CONTEXT, since BEGIN is reserved word.
```

                                0000    224 ;       41      - Dave Butenhof, 18-feb-1981, version 6.3
                                0000    225 ;               Delete use of SEP psect.
                                0000    226 ;
                                0000    227 ;       42      - Dave Butenhof, 16-mar-1981, version 6.3
                                0000    228 ;               Fix ^C handling; move flag clears to make user status=0
                                0000    229 ;               return work under APT.
                                0000    230 ;
                                0000    231 ;       43      - Dave Butenhof, 23-mar-1981, version 6.3
                                0000    232 ;               Expand Exec/Supervisor stack to 3 pages each.
```

```
                        0000   234 ;       44      - Jack Stansbury, 21-Oct-1981, Version 6.5
                        0000   235 ;               Added calls to QA$MAIN for the QA enhancement.
                        0000   236 ;               Also added .LIBRARY statements for $DS and $DIAG.
                        0000   237 ;               Also changed one of the error messages to lower case.
                        0000   238 ;               Also fixed some truncation errors.
                        0000   239 ;
                        0000   240 ;       45      - Jack Stansbury, 10-Nov-1981, Version 6.5
                        0000   241 ;               Changed ALL W^ to L^.
                        0000   242 ;
                        0000   243 ;       46      - Dave Butenhof, 12-Nov-1981, version 6.5
                        0000   244 ;               Add DS$GB_TYPECODE for 'SET BINARY' function.
                        0000   245 ;
                        0000   246 ;       47      - Dave Butenhof, 13-Nov-1981, version 6.5
                        0000   247 ;               Implement EXIT command (DSV$EXIT).  It will do an
                        0000   248 ;               $EXIT in user mode, or a HALT in standalone; after
                        0000   249 ;               doing program cleanup, etc.
                        0000   250 ;
                        0000   251 ;       48      - Jack Stansbury, 21-Nov-1981, Version 6.5
                        0000   252 ;               Commented out several calls to QA_MAIN because it appears as
                        0000   253 ;               though they will not be needed for the 6.5 DS version.
```

```
                        0000   255 ;
                        0000   256 ;       49      - Dave Butenhof, 14-Dec-1981, version 6.6
                        0000   257 ;               Modify startup to use $GETSYI call in usermode, to get
                        0000   258 ;               the actual processor SID into DSA$GL_SID.
                        0000   259 ;
                        0000   260 ;       50      - Dave Butenhof, 29-Dec-1981, version 6.6
                        0000   261 ;               Add locations to store error counts for HARD, SOFT, DEVICE,
                        0000   262 ;               SYSTEM, and SOFTWARE (ERRSUP) errors.
                        0000   263 ;
                        0000   264 ;       51      - Jack Stansbury, 10-Feb-1982, Version 6.6X
                        0000   265 ;               Added another Control-C handler for the DS to use. This is for
                        0000   266 ;               QA to trap control-c's, but can be used by any other
                        0000   267 ;               DS-integrated facility. See the KB_Check routine for the code.
                        0000   268 ;
                        0000   269 ;       52      - Dave Butenhof, 09-Mar-1982, version 6.6
                        0000   270 ;               Add support for rooted systems.  When booted from DIAGBOOT,
                        0000   271 ;               startup code will do 'SET LOAD' command on the filespec in the
                        0000   272 ;               RPB$T_FILE field.
```

```
                        0000   274 ;       53      - Dave Butenhof, 26-Mar-1982, version 6.7
                        0000   275 ;               Fix rooted system directory support...redefine SYS$DISK when
                        0000   276 ;               translating SYS$SYSROOT.  SYS$SYSROOT:[SYS0.SYSMAINT] don't
                        0000   277 ;               Added SYS$LIBRARY:LIB.
                        0000   278 ;
                        0000   279 ;       54      Marion Baggett, 31-Mar-1982, Version 6.7
                        0000   280 ;               Added SYS$LIBRARY:LIB
                        0000   281 ;
                        0000   282 ;       55      Marion Baggett, 2-Apr-1982, Version 6.7
                        0000   283 ;               Added DS$GL_PREPERR_COUNT field to count device preparation   ;G:2
                        0000   284 ;               errors.                                                      ;G:2
                        0000   285 ;
                        0000   286 ;       56      Marion Baggett, 5-Apr-1982, Version 6.7
                        0000   287 ;               Changed $DS_PRINT to $PRINT macros.
                        0000   288 ;
                        0000   289 ;       57      Marion Baggett, 7-Apr-1982, Version 6.7
                        0000   290 ;               Added $DS_TYPEDEF to define type codes.
                        0000   291 ;
                        0000   292 ;       58      Dave Butenhof, 08-Apr-1982, version 6.7
                        0000   293 ;               Fix truncation error.
                        0000   294 ;
                        0000   295 ;       59      Jack Stansbury, 9-Apr-1982, Version 6.7
                        0000   296 ;               Added $CRD Library statement. Added support for the
                        0000   297 ;               Customer Runnable Diagnostic package.
                        0000   298 ;
                        0000   299 ;       60      Dave Butenhof, 13-Apr-1982, version 6.7
                        0000   300 ;               Add setup of DS$GB_INHIBIT_NAMING, to enable/disable
                        0000   301 ;               generic name enforcement. (Set in APT mode).
```

```
                        0000    303 ;
                        0000    304 ;       61      Dave Butenhof, 17-May-1982, version 6.8
                        0000    305 ;               Fix size of Kernel stack (make it larger to minimize trouble).
                        0000    306 ;
                        0000    307 ;       62      Dave Butenhof, 21-May-1982, version 6.8
                        0000    308 ;               Automatically attach console device at startup, to make
                        0000    309 ;               RMS and DIRECTORY a bit simpler (no special case for device
                        0000    310 ;               without Ptable).
                        0000    311 ;
                        0000    312 ;       63      Jack Stansbury, 7-June-1982, Version 6.8
                        0000    313 ;               Added code in DSV$Exit routine that will not allow the user
                        0000    314 ;               to Continue (console command) once a HALT instruction has been
                        0000    315 ;               executed - only if CRD-AutoTest bits are set in the R5 passed
                        0000    316 ;               to the DS.
                        0000    317 ;
                        0000    318 ;       64      Jack Stansbury, 9-Jun-1982, Version 6.8
                        0000    319 ;               Added code in the DSV$Exit routine that will allow output of
                        0000    320 ;               pertinent CRD variables when a CRD-Internal error occurs. This
                        0000    321 ;               is indicated by CRD changing the byte in its own dispatch vector
                        0000    322 ;               area (DS$GA_CRD_Starting_Address + 1) to be one more than the ;G:2
                        0000    323 ;               absolute value of its dispatch vectors + 2 byte. That is, CRD ;G:2
                        0000    324 ;               will increment the "positive version number" in its dispatch  ;G:2
                        0000    325 ;               vector area by one when it detects a internal error. CRD will ;G:2
                        0000    326 ;               then put the values of a select number of pertinent variables ;G:2
                        0000    327 ;               into its own dispatch vector area. DSV$Exit will print these  ;G:2
                        0000    328 ;               out when the user types a console Continue command.           ;G:2
                        0000    329 ;
                        0000    330 ;       65      Marion Baggett, 9-June-1982, Version 6.8
                        0000    331 ;               Increase the size of the interupt stack to 4 pages so the
                        0000    332 ;               Vax Architecture exerciser will run.
                        0000    333 ;
                        0000    334 ;       66      Richard Brown, 15-June-82, Version 6.8
                        0000    335 ;               Addition of IMAGE_HEADER, which is a buffer to hold the
                        0000    336 ;               image header of a diagnostic file, if the file was linked
                        0000    337 ;               with a header.  The header is used by the debugger.
                        0000    338 ;
                        0000    339 ;       67      Jack Stansbury, 28-June-1982, Version 6.8
                        0000    340 ;               Disabled ^C's in stand-alone initialization code so that CRD  ;G:2
                        0000    341 ;               will have a chance to set up a ^C handler. This takes care of ;G:2
                        0000    342 ;               the problem of ^C's being typed while DIAGBOOT is running, and ;G:2
                        0000    343 ;               then having the DS see the ^C before CRD is loaded in (thus   ;G:2
                        0000    344 ;               causing the DS> prompt to appear without the DS_Start message ;G:2
                        0000    345 ;               being printed). ^C's are re-enabled in the Begin_0 code.      ;G:2
```

```
0000    347 ;
0000    348 ;       68      Richard Brown, 16-July-82, Version 6.9
0000    349 ;               Addition of code in INIT_CONTEXT to see if the T-bit is set
0000    350 ;               in the PSL and if so to set it in the new PSL.  This is so
0000    351 ;               that if the debugger has set the T-bit, it will not be cleared
0000    352 ;               out when the context is initialized.
0000    353 ;
0000    354 ;       69      Jack Stansbury, 24-July-1982, Version 6.9
0000    355 ;               Added two new routine that return a 1 in R0 iff the correct   ;G:2
0000    356 ;               bits are set in Boot$L_R5 for CRD_AutoTest and for            ;G:2
0000    357 ;               CRD_MenuTest. Used these routines in the Begin0 part.         ;G:2
0000    358 ;
0000    359 ;       70      Jack Stansbury, 27-July-1982, Version 6.9
0000    360 ;               Added another ^C handler for the VDS. This allows CRD Menu Test ;G:2
0000    361 ;               to let the User handle a ^C if the user has established a     ;G:2
0000    362 ;               handler routine; but at the same time, if this user routine   ;G:2
0000    363 ;               returns failure meaning they did not want to handle it, let the ;G:2
0000    364 ;               "third" handler (VDS's second handler) have it. Leave DS$Cli  ;G:2
0000    365 ;               as the last chance handler.                                   ;G:2
0000    366 ;
0000    367 ;       71      Jack Stansbury, 8-September-1982, Version 6.9
0000    368 ;               Made some changes to the DSV$Exit routine for CRD Menu Test.  ;G:2
0000    369 ;               Also made a few changes to the routines mentioned in 69 above ;G:2
0000    370 ;               - they were looking at the wrong bits.                        ;G:2
0000    371 ;
0000    372 ;       72      Jack Stansbury, 15-September-1982, Version 6.9
0000    373 ;               Cleared out the three ^C handler addresses in the VDS         ;G:2
0000    374 ;               stand-alone initialization code.                              ;G:2
0000    375 ;
0000    376 ;       73      Jack Stansbury, September 15, 1982, Version 6.9
0000    377 ;               Made the DS$L_UserCntrlC longword global, for use by the CLI  ;G:2
0000    378 ;               routine.                                                      ;G:2
0000    379 ;
0000    380 ;       74      Jack Stansbury, September 23, 1982, Version 6.9
0000    381 ;               Added a print statement to be printed if the CRD               ;G:2
0000    382 ;               initialization fails.                                         ;G:2
0000    383 ;
0000    384 ;       75      Jack Stansbury, September 24, 1982, Version 6.9
0000    385 ;               Added code to check to see if both CRD bits were set in the R5 ;G:2
0000    386 ;               passed to the VDS from Diagboot. If so, print an error message ;G:2
0000    387 ;               and exit.                                                     ;G:2
0000    388 ;
0000    389 ;       76      Jack Stansbury, September 28, 1982, Version 6.9
0000    390 ;               Added code to take care of the following: Start up the VDS.   ;G:2
0000    391 ;               Type CRD. Hit ^P while CRD is running - get back to ">>>"     ;G:2
0000    392 ;               console prompt. Type S 10000 - get a DS> prompt. Type CRD     ;G:2
0000    393 ;               again,but the CRD image is already loaded. This was causing a ;G:2
0000    394 ;               halt at PC = 00000001. So, the solution is to call the        ;G:2
0000    395 ;               Unload_CRD routine when the bits are set in the DSA flags     ;G:2
0000    396 ;               longword when the Supervisor is being inited (it is           ;G:2
0000    397 ;               normally inited without any of the CRD bits being set).
0000    398 ;
0000    399 ;       77      Bob Bergazzi    7-Oct-82        Version 6.9
0000    400 ;               Changed the way system service vectors are handled; after wecopy ;G:
0000    401 ;               the VMS system service vectors to 10200 (in order to get the
0000    402 ;               correct word mask), modify each entry point to immediately JMP
0000    403 ;               to the corresponding entry point in the real system service   ;G:36
```

```
                                0000    404 ;               table at 80000xxx. This solves the problem of code in the system
                                0000    405 ;               service vectors which branches around outside of the three pages
                                0000    406 ;               which we were copying before.
                                0000    407 ;
                                0000    408 ;       78      Bob Bergazzi    24-Nov-82       Version 6.10
                                0000    409 ;               Added a call to load the PCS on startup (DS$_LOADPCS_S)
                                0000    410 ;
                                0000    411 ;       79      Jack Stansbury, 4-Mar-83, Version 6.11
                                0000    412 ;               Changed the code in the DSR$Check routines (for CRD) - they must
                                0000    413 ;               check the DSA bits while online, not the Boot$L_RS longword.
                                0000    414 ;
                                0000    415 ;       80      John Ciukaj,    2-Apr.-1983     Version 6.11
                                0000    416 ;               - Changed code that referenced CRD bits in DSA Flags.
                                0000    417 ;                 The bits were redefined to distinguish between
                                0000    418 ;                 online and offline.
                                0000    419 ;               - Changed name of DSR$Check_... routines to distinguish
                                0000    420 ;                 between Online and Offline.
                                0000    421 ;
                                0000    422 ;       81      Bob Bergazzi    8-Apr-1983      Version 6.11
                                0000    423 ;               Made on-line mode start up with terminal width set to 80.
                                0000    424 ;
                                0000    425 ;       82      Bob Bergazzi    25-April-1983   Version 6.11
                                0000    426 ;               During boot of ESSAA, we must determine if this is 780 or a
                                0000    427 ;               785, and if it is a 785, then we need to change
                                0000    428 ;               the clock overhead factor (DS$GK_USOVR) in the WAITUS routine.
                                0000    429 ;               This is done by referencing the symbol DSX$WAITUS_USOVR which
                                0000    430 ;               addresses the beginning of the instruction which uses the
                                0000    431 ;               overhead factor, and modifying the instruction. This is done
                                0000    432 ;               in order to avoid adding more instructions to the DSX$WAITUS
                                0000    433 ;               routine which would change the value of the DS$GK_USOVR for
                                0000    434 ;               existing processors.
                                0000    435 ;
                                0000    436 ;       83      Bob Bergazzi    25-April-1983   Version 6.11
                                0000    437 ;               Increased SCB size to 4 pages for VENUS. Related changes in
                                0000    438 ;               SCB module.
                                0000    439 ;
                                0000    440 ;       84      John Ciukaj     29-Apr-83       version 6.11
                                0000    441 ;                               13-May-83
                                0000    442 ;               DSR$Check.. routines: check both DSA Flags and RPB
                                0000    443 ;               regardless of Standalone or Online.
                                0000    444 ;
                                0000    445 ;       85      Bob Bergazzi    May 16,1983     Version 6.11
                                0000    446 ;               Changed the order of the .LIB statements.
                                0000    447 ;
                                0000    448 ;       86      M.Baggett       May 16, 1983    Version 6.11
                                0000    449 ;               Get RPB$L_BOOTR2 field from RPB.
                                0000    450 ;
                                0000    451 ;       87      Richard Brown   June 22, 1983   Version 6.12
                                0000    452 ;               Added code to fetch user terminal characteristics
                                0000    453 ;               and store them in $DSGL_TERMCHAR so the new service
                                0000    454 ;               $DS_GETTERM can pass them to a diagnostic.
                                0000    455 ;
                                0000    456 ;               Added new system service $DS_GETTERM, which returns
                                0000    457 ;               the characteristics of the user terminal.
                                0000    458 ;
                                0000    459 ;       88      Bob Bergazzi    Sep 22, 1983    Version 6.13
                                0000    460 ;               Added a $CANTIM if a ^C is typed to cancel a $SETIMR
```

```
0000   461 ;                which may have been done at program start for the
0000   462 ;                /TIME switch.
0000   463 ;                Commented out for version 6.13 and 6.14, and 7.0
0000   464 ;
0000   465 ;        89      Bob Bergazzi    11-11-83        Version 6.14
0000   466 ;                Clear the DS$M_CTRLC and DS$M_CTRLO flags before we call
0000   467 ;                a control-c handler. This fixes the problem of terminal
0000   468 ;                output in a ^C handler being suppressed in S/A.
0000   469 ;
0000   470 ;        90      Bob Bergazzi    12-28-83        Version 6.14
0000   471 ;                The definition of JIB$L_ARB in the JIB was removed from VMS V4,
0000   472 ;                so define it to its old offset value (the space in the JIB is
0000   473 ;                still there).
0000   474 ;
0000   475 ;        91      Bob Bergazzi    2-14-84         Version 6.14
0000   476 ;                Moved the code which builds ptables for the console load device
0000   477 ;                and the boot device into the CONFIG module, called by
0000   478 ;                JSB INI$LOAD_DEVICE. This was done so SET MEM could call it.  ;G:2
0000   479 ;
0000   480 ;        92      Richard Brown   May 14, 1984    Version 7.0
0000   481 ;                Added display of legal statement on startup.
0000   482 ;
0000   483 ;        93      M. Baggett      May-17-1984     Version 7.0
0000   484 ;                Allow word length unit to be save in RPB.
0000   485 ;
0000   486 ;        94      Bob Bergazzi    May 18, 1984    Version 7.0
0000   487 ;                Made legal display not print out when running under APT.
0000   488 ;
0000   489 ;        95      Bob Bergazzi    June 19, 1984   Version 7.0
0000   490 ;                Also, do not display legal message when CRD is running.
0000   491 ;
0000   492 ;        96      R.E. Muse       July 13, 1984   Version 7.0
0000   493 ;                Search order bit mask added to $TRNLOG system service.
0000   494 ;                SYS$DISK is now search for in the system logical name
0000   495 ;                table exclusively.
0000   496 ;
0000   497 ;        97      R.E. Muse       19 July 1984    version 7.0
0000   498 ;                logical translation for SYS$SYSROOT added and SYS$DISK
0000   499 ;                removed. Now default directory is "[sys0.sysmaint].
0000   500 ;
0000   501 ;        98      Bob Bergazzi    July 27, 1984   Version 7.1
0000   502 ;                Moved $DS_LOADPCS to after memory is initialized and ptables
0000   503 ;                are built and RMS is initialized, so that we can load
0000   504 ;                patches from a file.
0000   505 ;
0000   506 ;        99      Bob Bergazzi    Aug. 30, 1984   Version 7.1
0000   507 ;                Added call to HDW_CLOCK_SET to do cpu specific clock setup.
0000   508 ;
0000   509 ;        100     Ron Parker      November 1,1984 Version 7.1
0000   510 ;                Added support for CRD_Menutest_Online
0000   511 ;
0000   512 ;        101     RE Muse         Novemeber 7,1984 version 7.1
0000   513 ;                removed PSECT _LAST and placed in each machine specific
0000   514 ;                ONLYnnn module. This was done in particular to accomodate
0000   515 ;                the large SCB page allocation for NAUTILUS, otherwise all
0000   516 ;                supervisor's would carry more SCB page allocation than
0000   517 ;                really needed. ie. nautilus needs 37 pages for the scb.

Assembler run totals	2650	00:00:10.94	00:00:20.17

```
The working set limit was 3900 pages.
429806 bytes (840 pages) of virtual memory were used to buffer the intermediate code.
There were 130 pages of symbol table space allocated to hold 2357 non-local and 116 local symbols.
2703 source lines were read in Pass 1, producing 174 object records in Pass 2.
111 pages of virtual memory were used to define 89 macros.
```

0000    28 ;++
0000    29 ; FACILITY:     VAX DIAGNOSTIC SUPERVISOR
0000    30 ;
0000    31 ; ABSTRACT:
0000    32 ;                This routine is designed to read diagonostic
0000    33 ;       programs into memory.  It removes ALL breakpoints from
0000    34 ;       the previous program and opens the file specified by
0000    35 ;       the LOAD command and reads it starting at memory address
0000    36 ;       DS$GA_PRGBGN (^X200).
0000    37 ;
0000    38 ; ENVIRONMENT:
0000    39 ;       Loads programs in user mode
0000    40 ; and   Loads from floppy and RMS disks in stand-alone
0000    41 ;
0000    42 ; AUTHOR:       TOM SOUTTER     10-NOV-77       VERSION 01
0000    43 ;
0000    44 ; MODIFIED BY:
0000    45 ;                TOM SOUTTER     21-NOV-77       VERSION 02
0000    46 ;       01       SPR #16  "N.Y.I." MESSAGES FOR STAND-ALONE 'RUN' OR 'LOAD'.
0000    47 ;
0000    48 ;                TOM SOUTTER     24-MAR-78       VERSION 03 (ESSAA-4.01)
0000    49 ;       02       FIX TO LOAD ALGORITHM TO READ FILE BLOCKS "IN USE" ONLY
0000    50 ;
0000    51 ;                Roger Riggs     06-Jul-78       Version 04 (ESSAA-4.03)
0000    52 ;       03       Modify load sequence to use $READ and to read whole
0000    53 ;                file in one operation. verification is equivalent
0000    54 ;
0000    55 ;       04       Eliminate message for successful program load.  /TLS
0000    56 ;                Roger Riggs     26-Oct-78       Version 05 (ESSAA-5.01)
0000    57 ;       05       Add DSX$LOAD to allow diagnostic to read files into memory
```

```
0000     58 ;                  Include facility for stand alone load from ODS-1/ODS-2 structures
0000     59 ;          06      Add floppy support in stand alone
0000     60 ;          07      Add SET LOAD and SHOW LOAD commands
0000     61 ;          08      Add DSR$IFLOADDEV to let attach(select) know if it is
0000     62 ;                  dealing with the load device.
0000     63 ;          09      REMOVE W^ from calls to DSP$XX_READ
0000     64 ;
0000     65 ;                  JOHN CIUKAJ     NOV-79
0000     66 ;          10      Modify DSX$LOAD for loadable drivers. BOO$QIO is used for
0000     67 ;                  resident driver. Pseudo restart parameter block is developed
0000     68 ;                  for use in BOO$QIO.
0000     69 ;
0000     70 ;          11      John Ciukaj     2-15-80
0000     71 ;                  Change RPB block building in LOADFILE_SA to reflect new
0000     72 ;                  structure of BOOTDRIVER module.
0000     73 ;                  Roger Riggs     29-FEB-80
0000     74 ;          12      Added code to support 7th argument to DS$LOAD allowing
0000     75 ;                  the program to read sections of the file, the LOAD$_LBN
0000     76 ;                  argument supplies the starting logical block number of the
0000     77 ;                  first block to be read from the file.
0000     78 ;                  Roger Riggs, 5-June-1980, Version 5.4
0000     79 ;          13      Moved code to reset stacks and mode to before DS_CLEANUP is
0000     80 ;                  called.
0000     81 ;
0000     82 ;                  Dave Butenhof, 27-aug-1980
0000     83 ;          14      Define DEF$Q_DIR to be global, so it is accessible to
0000     84 ;                  new standalone RMS routines.
0000     85 ;                  Also deleted DSX$LOAD routine it has been moved to DSLOAD.
0000     86 ;                  Roger Riggs, 17-Sep-1980, Version 6.0
0000     87 ;          15      Deleted Reference to L$A_LASTADR in DSV$LOAD, MAPFREE
0000     88 ;                  now checks the loaded bit and L$A_LASTADR
0000     89 ;
0000     90 ;          16      - Jack Stansbury, 26-Oct-1981, Version 6.-
0000     91 ;                  Added .LIBRARY statements for $DS and $DIAG.
0000     92 ;                  Also fixed truncation errors.
0000     93 ;
0000     94 ;          17      Marion Baggett, 31-Mar-1982, Version 6.7
0000     95 ;                  Added sys$library:lib .
0000     96 ;
0000     97 ;          18      Marion Baggett, 7-Apr-1982, Version 6.7
0000     98 ;                  Added $DS_TYPEDEF to define type def codes.
0000     99 ;
0000    100 ;          19      Jack Stansbury, 13-April-1982, Version 6.7
0000    101 ;                  Fixed truncation error.
0000    102 ;
0000    103 ;          20      Richard Brown, 15-June-82, Version 6.8
0000    104 ;                  Clear image header storage buffer before loading diag.
0000    105 ;                  Then save the name of the file being loaded, so the debugger
0000    106 ;                  can use it later.
0000    107 ;                  Also, clear debugger-resident flag before loading diag.
0000    108 ;
0000    109 ;          21      Richard Brown, 8-Mar-84, Version 6.15
0000    110 ;                  Add code to clear all event flags before a new program
0000    111 ;                  is loaded.
0000    112 ;
0000    113 ;          22      RE MUSE         15-MAY-84       VERSION 7.0
0000    114 ;                  added support for longfile names
```

```
0000    115 ;
0000    116 ;       23      M. Baggett      19-FEB-1985     VERSION 8.1
0000    117 ;               Added support for ULTRIX set load.
0000    118 ;
0000    119 ;       24      M. Baggett      21-May-1985     Version 8.2
0000    120 ;               Added more flags for ULTRIX operations
0000    121 ;
0000    122 ;       25      M. Baggett      3-Jun-1985      Version 8.3
0000    123 ;               Changes to set load to support ULTRIX, remove unneed flags,
0000    124 ;               and change [23].
0000    125 ;
0000    126 ;       26      Bob Bergazzi    7-Jan-1986      Version 9.1
0000    127 ;               Removed DEF$Q_DEV, DEF$Q_DIR, SYS$SYSROOT, and SYS$DISK
0000    128 ;               from this module to the ONLY modules,
0000    129 ;               so that the default directory for each system could differ.
0000    130 ;                                                                       ;G:2
0000    131 ;               Steven Fortuna  22-May-1987     Version  10.9           ;G:2
0000    132 ;               Add the capablity for giving a SET LOAD command to a device   ;G:2
0000    133 ;               name or logical path name without the need for the input      ;G:2
0000    134 ;               string to be terminated with a ':'.  Symptom was the         ;G:2
0000    135 ;               SET LOAD command would accept input without a ':' but the     ;G:2
0000    136 ;               default directory did not change nor was an error reported    ;G:2
0000    137 ;               to the user.                                                  ;G:2
0000    138 ;                                                                       ;G:2

```
The working set limit was 2400 pages.
71473 bytes (140 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 290 non-local and 30 local symbols.
532 source lines were read in Pass 1, producing 35 object records in Pass 2.
30 pages of virtual memory were used to define 21 macros.
```

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	39	00:00:00.02	00:00:00.22
Command processing	933	00:00:00.30	00:00:00.99
Pass 1	409	00:00:01.25	00:00:02.52
Symbol table sort	0	00:00:00.13	00:00:00.13
Pass 2	19	00:00:00.38	00:00:00.87
Symbol table output	2	00:00:00.02	00:00:00.02
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	3	00:00:00.03	00:00:00.06
Assembler run totals	1407	00:00:02.13	00:00:04.81

The working set limit was 2900 pages.
82994 bytes (163 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 481 non-local and 10 local symbols.
225 source lines were read in Pass 1, producing 39 object records in Pass 2.
17 pages of virtual memory were used to define 16 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	3
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	3
SYS$COMMON:[SYSLIB]STARLET.MLB;2	5
SYS$COMMON:[SYSLIB]STARLET.MLB;2	0
TOTALS (all libraries)	12

709 GETS were required to define 12 macros.

There were no errors, warnings or information messages.

                     0000     47 ;                 Dave Butenhof, 1-Mar-1980
                     0000     48 ;         04      Changed all references to APT mailbox to use longword
                     0000     49 ;                 offsets.
                     0000     50 ;                 Roger Riggs, 18-Mar-1980
                     0000     51 ;         05      Changed loop on subtest to execute the subtest the
                     0000     52 ;                 specified number of times instead of the previous +1.
                     0000     53 ;                 also made post loop on subtest processing call DS_CLEANUP
                     0000     54 ;                 - Dave Butenhof, 22-Jun-1981, version 6.4
                     0000     55 ;         06      Fix edit 5: delete explicit setting of DS$V_DONFLG, which
                     0000     56 ;                 prevented DS_CLEANUP from actually executing the diagnostic's
                     0000     57 ;                 cleanup code.
                     0000     58 ;         07      Fix /subtest to work right with /test:n:m.  It will only loop
                     0000     59 ;                 on the last test selected.
                     0000     60 ;
                     0000     61 ;         08      - Jack Stansbury, 21-Oct-1981, Version 6.-
                     0000     62 ;                 Added calls to QA$MAIN for the QA enhancement.
                     0000     63 ;                 Also added .LIBRARY statements for $DS and $DIAG.
                     0000     64 ;                 Also changed the case of some of the error messages.
                     0000     65 ;
                     0000     66 ;         09      - Dave Butenhof, 02-Nov-1981, version 6.-
                     0000     67 ;                 Fix truncation errors throughout.
                     0000     68 ;
                     0000     69 ;         10      - Jack Stansbury, 21-Nov-1981, Version 6.5
                     0000     70 ;                 Commented out a call to QA_MAIN because it appears that it
                     0000     71 ;                 will not be needed for the 6.5 DS version.
                     0000     72 ;
                     0000     73 ;         11      - Jack Stansbury, 13-Jan-1982, Version 6.6
                     0000     74 ;                 Added comments galore to make things easier to understand.
                     0000     75 ;
                     0000     76 ;         12      - Jack Stansbury, 14-Jan-1982, Version 6.6
                     0000     77 ;                 Added a call to the Summary Code routine in the EndSub routine.
                     0000     78 ;                 The diagnostic's summary code will now be executed when
                     0000     79 ;                 the requested number of loops on subtest have been done.
                     0000     80 ;                 This is more consistent with the EndPass routine.
                     0000     81 ;
                     0000     82 ;         13      - Jack Stansbury, 15-Jan-1982, Version 6.6
                     0000     83 ;                 Changed the FMTLOOPDON message to make it more like the
                     0000     84 ;                 EndPass message. Also added "Test x.y" to the message.
                     0000     85 ;
                     0000     86 ;         14      - Jack Stansbury, 20-Jan-1982, Version 6.6
                     0000     87 ;                 Changed the code in the EndSub routine to not print the
                     0000     88 ;                 header line when the Loop_On_Subtest QA check routine is
                     0000     89 ;                 executing. This is for QA.
                     0000     90 ;
                     0000     91 ;         15      - Jack Stansbury, 29-Mar-1982, Version 6.?
                     0000     92 ;                 Added some typecoding.
                     0000     93 ;
                     0000     94 ;         16      Marion Baggett, 30-mar-1982,    Version 6.7
                     0000     95 ;                 Changed all $DS_PRINT statements to the new form $PRINT.
```

```

Pass 2	30	00:00:00.55	00:00:01.10
Symbol table output	2	00:00:00.05	00:00:00.16
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	6	00:00:00.22	00:00:00.41
Assembler run totals	1684	00:00:03.32	00:00:08.90

The working set limit was 2400 pages.
135589 bytes (265 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 401 non-local and 22 local symbols.
594 source lines were read in Pass 1, producing 54 object records in Pass 2.
44 pages of virtual memory were used to define 31 macros.

Macro library statistics

Macro library name	Macros defined

The working set limit was 1900 pages.
61016 bytes (120 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 328 non-local and 6 local symbols.
176 source lines were read in Pass 1, producing 31 object records in Pass 2.
17 pages of virtual memory were used to define 16 macros.

Symbol table output	2	00:00:00.03	00:00:00.06
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	3	00:00:00.03	00:00:00.03
Assembler run totals	1680	00:00:03.80	00:00:06.32

The working set limit was 2400 pages.
136309 bytes (267 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1209 non-local and 11 local symbols.
517 source lines were read in Pass 1, producing 77 object records in Pass 2.
18 pages of virtual memory were used to define 17 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
